DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are directed to a method, process or system for calculating or computing via a mathematical algorithm the exponent of floating point data of a particular type, e.g. single or double precision. The claims are not limited to a practical application of the mathematical algorithm because the exponent result is not a tangible result because it is not a real-world result.

The claims are also directed to a program per se. While the program contains functionally descriptive material the recording of the functionally descriptive material on some computer-readable medium, which would enable the functionality to be realized, fails to be recited.

Claim Rejections - 35 USC § 112

2. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, in lines 8 and 11 it appears that the word “biased” should precede the word “exponent”. In lines 8-9 the meaning of storing a value “in a storage variable” is unclear.

Art Unit: 2193

Finally in claim 1, in the last two lines what is meant by returning "the storage variable as the floating point data type? What is meant by claims 2-4, respectively. Claims 11 and 12-14 contain deficiencies similar to claim 1 and 2-4, respectively. The steps of claim 20 fail to be clearly related to the steps of claim 11 and the sequence thereof.
